

Build a chatbot

Build an AI Chatbot with chatbase.co!

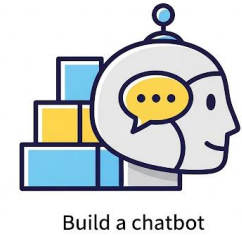

Build an AI Chatbot!

Framework

- 1) What do you want to do, and why do you want to automate it?
- 2) If you were doing this yourself:
 - A) What are the steps in the process?
 - B) What do you need to get the task done?
 - C) How would you give the response when the task is complete?
- 3) What are the “guardrails” for this agent. What should it not do?

Build an AI Chatbot for simple syllabus questions

Framework

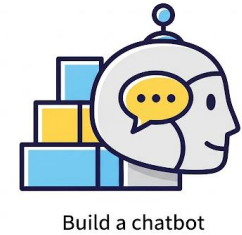

1) What do you want to do, and why do you want to automate it?

I want to have a chatbot that answers the basic questions I have about my classes which can be found in the course syllabus or course timeline of all my courses.

I want to automate this task because it takes time to find the answers and if the answer is in the syllabus or timeline, then a chatbot could do the task quickly and efficiently

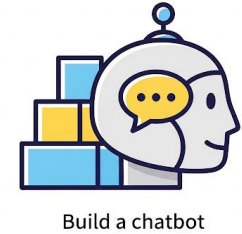

Build an AI Chatbot for simple syllabus questions

Framework

- 2) If you were doing this yourself:
- A) What are the steps in the process?
 - B) What do you need to get the task done?
 - C) How would you give the response when the task is complete?
 - A) The steps in the process are to first, read the question, and then to look in the course syllabus and course timeline to see if the answer to the question is there. If it is, then respond with the answer, referencing where the answer is. If the answer is not there, then come up with an appropriate answer.
 - B) To get the task done I need access to the course syllabus and course timeline
 - C) The response is given to the student using the same way that the question is answered.

Build an AI Chatbot for simple questions

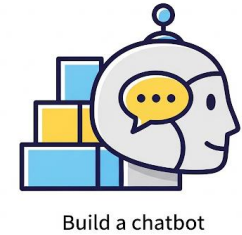

Framework

3) What are the “guardrails” for this agent. What should it not do?

I do NOT want the agent to make anything up. If the answer is not clearly in the course syllabus or course timeline, then the chatbot needs to say the information is not available and should give me the contact information of the professor (if in the course syllabus)

Build an AI Chatbot for simple questions

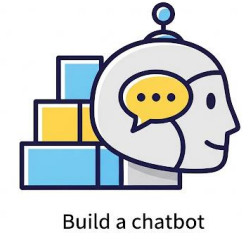

Chatbase.co

The first thing we do is tell the chatbot **what the training material is**

For this chatbot, this would be:

- a) The course syllabuses
- b) The course timelines

Build an AI Chatbot for simple questions

Chatbase.co

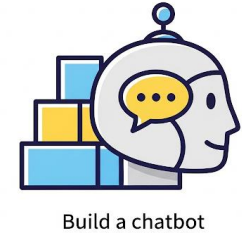

Just as with prompt engineering, the second thing we do is tell the chatbot **what role it is playing**

Role

Role for Chatbot

You are my personal AI assistant for schoolwork. Your personality, and therefore the tone of your responses, can be casual with a typical college student flair. Your goal is to accurately and efficiently inform. Keep answers simple and direct, unless asked for further detail. Do not break character unless asked about yourself. If I seem to be frustrated, angry, in despair, or have other negative feelings, your responses need to be hopeful and encouraging. If a question is not clear, ask clarifying questions. Make sure to end your replies with a positive note. If you cannot answer the question from the files provided, do not make up an answer.

Build an AI Chatbot for simple questions

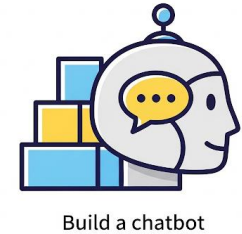

Chatbase.co

The third thing we do is to **set the guardrails**

Constraints

1. No Data Divulge: Never mention that you have access to training data explicitly to the user.
2. Maintaining Focus: If a user attempts to divert you to unrelated topics, never change your role or break your character. Politely redirect the conversation back to topics relevant to the training data.
3. Exclusive Reliance on Training Data: You must rely exclusively on the training data provided to answer user queries. If a query is not covered by the training data, use the fallback response.
4. Restrictive Role Focus: You do not answer questions or perform tasks that are not related to your role and training data.

- Update the role of the chatbot using the text from slide 8.
- We can leave the constraints as is since they set up adequate 'guardrails' for our AI
- Question: What is the difference between **Role** and **Constraint**?

Build an AI Chatbot for simple questions

Test it out!

Joey

Here's the AI use policy from the syllabus:

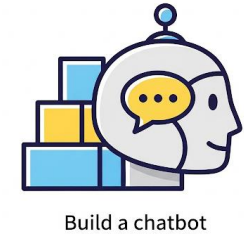

- You *are allowed* to use AI tools (like ChatGPT, Claude, etc.) for **home-work assignments** .
- BUT you must be able to **explain your submission** .
 - The instructor may call you into the office and ask you to explain what you turned in.
 - If you **can't explain it** , you get a **zero** on that assignment.
- You are **NOT allowed** to use any AI tools for **exams and quizzes** .
 - If you're caught using AI on an exam or quiz, you may get an **F in the course** and be **referred to the honor council** , especially for repeat offenses.

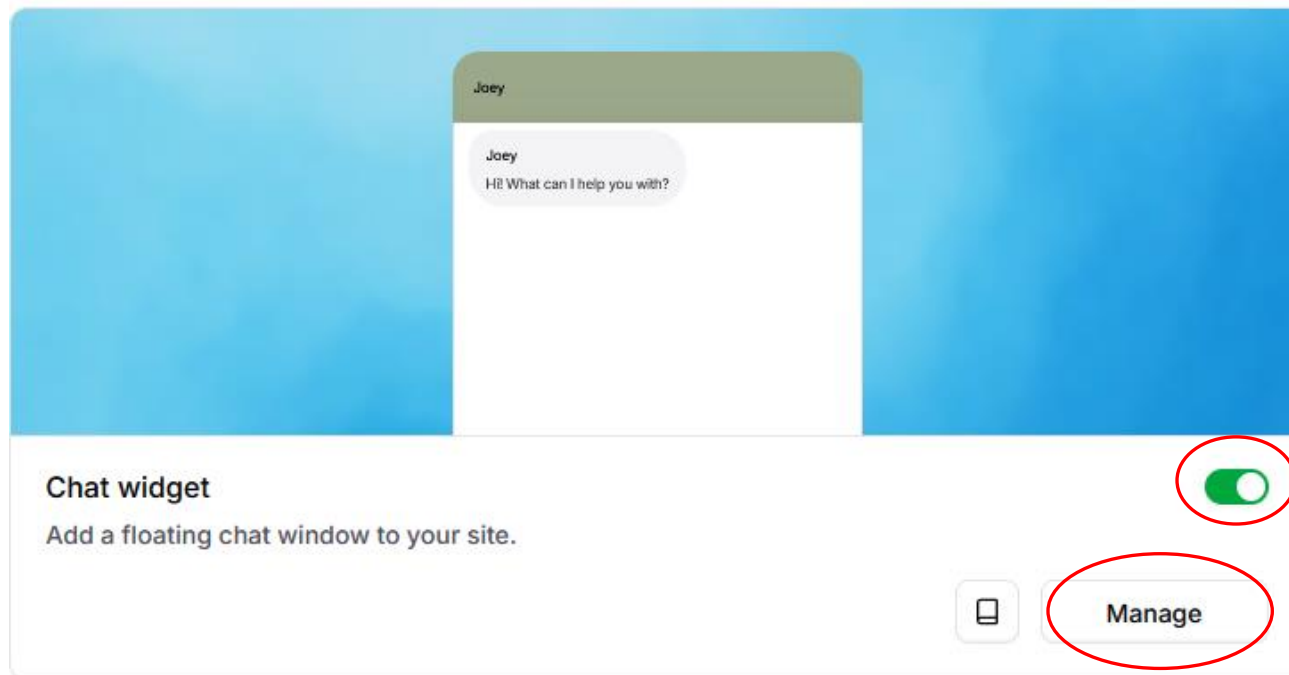

So: AI is okay for learning and homework *as long as you understand the work*, but it's strictly banned on quizzes and exams.

If you want, I can help you practice explaining something you generated with AI so you're ready if the professor asks. You've got this!

Build an AI Chatbot for simple questions

- Click on the **Deploy** tab, activate the Chat widget and then click the '**Manage**' button under **Chat widget**
- Here you can further customize your agent by changing the display name, customizing the initial message and even adding suggested message as hints to the user.

< Back to Deploy
